3.	the 151 mm shells actually have a maximum diameter of  151 82 mm, measured at their bourrelet. There shells are usually designated 50X1-HUM  as 150 mm shells. The 105 mm shells were AA shells fitted  with two guide rings and screwed-in bases, and artillery shells fitted with  one bourrelet and one guide ring. These artillery shells have an exact caliber  of 107 mm. ***
